Notes

- 2006 prices does not include inflation, discounting or financing. It provides a capital cost and a single representative year of operations, as if all costs and revenues were incurred in 2006.
 - Indicative Operational Recovery Rate: Operational Revenues expressed as a percentage of Operational Costs including adjustments. For Phase 1 facilities, the indicative year is taken as 2023; for Phase 2, 2035. These years are 5 to 10 years after the facility has opened.
 - All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.
- * including a small canopy

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cashflow techniques

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cashflow techniques

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

- 2006 prices does not include inflation, discounting or financing. It provides a capital cost and a single representative year of operations, as if all costs and revenues were incurred in 2006.
 - Indicative Operational Recovery Rate: Operational Revenues expressed as a percentage of Operational Costs including adjustments. For Phase 1 facilities, the indicative year is taken as 2023; for Phase 2, 2035. These years are 5 to 10 years after the facility has opened.
 - All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

- 2006 prices does not include inflation, discounting or financing. It provides a capital cost and a single representative year of operations, as if all costs and revenues were incurred in 2006.
- Indicative Operational Recovery Rate: Operational Revenues expressed as a percentage of Operational Costs including adjustments. For Phase 1 facilities, the indicative year is taken as 2023; for Phase 2, 2035. These years are 5 to 10 years after the facility has opened.
- All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.
- "Operational Revenue" of OACF refers to net revenue, and "Operational Expenditure and Adjustments" of OACF refer to competitiveness neutrality adjustment

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cashflow techniques

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

- NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.
- All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes
 1 Inflation rate is assumed to be 2% per annum. Staff and construction cost escalation rates are also assumed to 2% per annum (nominal) and therefore 0% real.
 2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.
 * including a small canopy

Notes

1 Inflation rate is assumed to be 2% per annum. Staff and construction cost escalation rates are also assumed to 2% per annum (nominal) and therefore 0% real.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.
* including a small canopy

Notes

1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

Notes

1 Inflation rate is assumed to be 2% per annum. Staff and construction cost escalation rates are also assumed to be 2% per annum (nominal) and therefore 0% real.

2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.

TOTAL												(9,058)

Notes

- 1 NPV is the present day value (at 2006) equivalent of a future cash flow. A NPV is calculated using discounted cash flow techniques.
- 2 All numbers are rounded to 0 decimal places (nearest \$ million) for presentational ease. The analysis is undertaken using Microsoft Excel spreadsheets, which work to more than 20 decimal places. As such, minor rounding may be observed in the presented tables.
